

STRUCTURED TRAINING IN IMPLANT DENTISTRY

A comprehensive new Certificate Programme in dental implantology will be launched at Manchester Dental Implant Clinic at ICE Hospital in Salford Quays in November 2017 from Ucer Education

Adding the provision of implant dentistry into general practice can be a highly rewarding experience and something most GDPs aspire to, but it is not something that can simply be learned overnight. With a multitude of courses being offered by various individuals of differing backgrounds and experience across the country, GDPs could be confused where to turn to for advice or training in this rapidly evolving field of dentistry including digital dentistry and its workflow.

It takes a significant amount of personal investment, both from a time and monetary perspective, to understand the assessment, diagnosis, treatment planning, placement and restorative aspects of implant dentistry. That is why ensuring those looking to place and/or restore implants are trained to the highest possible standards in theoretical and practical skills right from the very start.

A COMPREHENSIVE EDUCATION IN IMPLANTS

At Ucer Education our aim is to teach clinicians to become confident and competent in all aspects of surgical and restorative implant dentistry, providing education and training at Certificate level alongside the Clinical Training required to feel confident in moving onto an MSc in Dental Implantology.

Now in its 24 year, Ucer Education's Manchester Dental Implant Certificate Course (formerly 'A Multi-System Implantology Certificate Course') teaches clinicians how to incorporate implant treatment into their practices safely and with confidence using the most well-documented and proven implant systems.

The course is exclusively designed to provide clinicians with the theoretical and practical skills required to perform dental implants to the highest standard, either from a surgical and restorative or just restorative perspective, ready for them to move on to

clinical training if desired. It is especially suitable not just for GDPs looking to gain the skills necessary to move forward into implant dentistry, but an invaluable opportunity for more experienced GDPs who may be looking to establish a private dental practice or developing a substantial implant referral practice in the future.

A STRUCTURED FOUNDATION

The 12-day course, run over 12 months, covers all aspects of implant dentistry and has been designed to fulfil the requirements of the GDC/FGDP Training Standards in Implant Dentistry (2016) that any dental practitioner carrying out implant dentistry in the UK should undertake before embarking upon patient care in this discipline.

The course is led by Professor Cemal Ucer BDS, MSc, PhD, Oral Surgeon, a highly-regarded authority on implant education and co-author of the GDC/FGDP training standards, alongside a faculty of highly-trained and experienced professionals.

Having trained over 7,000 dentists, Ucer Education understands the important role mentoring plays for those starting out in implant dentistry. Under expert supervision delegates undergo a series of lectures by renowned speakers, seminars, tutorials and hands-on practical sessions including a Clinical Day using the Straumann® Dental Implant System. Delegates also undertake literature reviews, learn the surgical and restorative principles of implant dentistry and perform live surgical procedures and restorative stages of treatment, all under the supervision of dedicated mentors.

Covering everything from basic surgical techniques, patient assessment, treatment planning, advanced hard and soft tissue techniques, bone grafting through to laboratory and technical procedures, this multi-technique teaching approach ensures a fully rounded learning opportunity. The curriculum fulfils all the learning objectives and revision necessary to prepare a candidate looking to undertake further postgraduate education such as the Diploma in Implant Dentistry RCS Ed, MSc in Dental Implantology or MSc in Digital Dentistry.

STATE-OF-THE-ART FACILITIES

The Manchester Dental Implant Certificate Course is held at the Manchester Dental Implant Clinic, based at the ICE Hospital & Postgraduate Dental Institute in Salford Quays, Manchester - a thriving destination on Greater Manchester's waterfront at the Media-city and easily reached by all major transport links.

The ICE Hospital offers state-of-the-art teaching facilities for both academic and clinical skill training. The ground floor has 7 surgeries, a full-equipped dental laboratory, a fully-equipped operating theatre and day care surgery facilities with two consultant anaesthetists and all relevant medical staff. The hospital has a diagnostic centre including a Morita CBCT scanner and a full digital workflow. Air-conditioned lecture rooms across the first floor are fitted with high-quality video conference and webinar facilities.

With such reputable training pathways on offer with Ucer Education and the opportunity to work closely with a mentor, the next generation of implant clinicians can now benefit from an effective combination of hands-on practical experience to move forward towards their goal of integrating dental implants and the latest digital technology into their own practices.
